## KEY TO Rx PRODUCT LISTINGS

### How to Find an Rx Product

The layout of *Red Book* product listings allows for easier identification of Rx products, manufacturer names, generic cross-references, HCFA Federal Upper Limit prices for Medicaid reimbursement, and repackagers of pharmaceutical products. Products are listed alphabetically by their prevailing names, as explained below. (For information on how to locate and interpret OTC and non-drug product listings, refer to section 9. Information on complementary/herbal listings can be found in section 10.)

Product quantities now appear in National Council for Prescription Drug Programs (NCPDP) standard billing units (e.g., ea, ml, gm). Please see Section 5, "Drug Reimbursement Information," for an explanation of the NCPDP standard. A conversion table can be found in Section 2, "Clinical Reference Guide."

**Trademarked Name:** Detailed product information is available under the actual brand name rather than the generic name; i.e., "Valium" product information is listed under "Valium" rather than under diazepam. However, you will find a cross-reference under Roche, the manufacturer of Valium, in the diazepam listing.

<b>VALIUM (Roche Prod)</b>			
diazepam			
TAB, PO, 10 mg,			
100s ea, C-IV	00140-0006-01	168.92	AB

**Generic Name:** In-depth product information on generic products can be found by locating the generic product name, under which the various manufacturers, suppliers, or distributors are listed alphabetically; i.e., diazepam features several dozen generic manufacturers. Manufacturers listed under their trademarked product name feature a cross-reference to that name.

<b>DIAZEPAM</b>			
<b>HCFA</b>			
TAB, PO, 2 mg, 100s ea		2.09	
(Abbott Hosp)			
INJ, 1J (AMP)			
5 mg/ml,			
2 ml 10s, C-IV	00074-3210-01	86.69	AP
(Roche Prod) See VALIUM			

Single-ingredient generic names are spelled out in full. Multi-ingredient products (two or more) are listed in the alphabetical order of their ingredients using the standard abbreviations listed on the following pages.

### Drug Class Symbols

The following descriptive symbols indicate a product's status under the Controlled Substances Act of 1970. They apply to all entries under the product name or dosage form in which they appear. Use these symbols only as a guide. Check the manufacturer's label for definitive information.

<b>C-II</b>	High Potential for Abuse. Prescriptions must be written in ink or typewritten and signed by the practitioner. Verbal prescriptions must be confirmed in writing within 72 hours and may be given only in a genuine emergency. No renewals.
<b>C-III</b>	Some Potential for Abuse. Prescriptions may be oral or written. Up to 5 renewals are permitted within 6 months.
<b>C-IV</b>	Low Potential for Abuse. Prescriptions may be oral or written. Up to 5 renewals are permitted within 6 months.
<b>C-V</b>	Subject to State and Local Regulation. Abuse potential is low; a prescription may not be required.
<b>Rx</b>	Prescription only; not a controlled substance.

### How to Read the Listings

The first line of an entry features the product or generic name. HCFA Federal Upper Limit price information is provided for all applicable multi-source product categories. The **HCFA** symbol can be found immediately following the generic product name. A complete listing of Federal Upper Limit prices appears in Section 5 (Drug Reimbursement Information).

Manufacturers are listed alphabetically within generic listings. Repackagers of products feature the **REPACK** symbol next to their names. For trade name listings, generic cross-references appear in lower case on the following line.

A three-letter abbreviation indicates the form of the drug; i.e., CAP indicates capsules, TAB indicates tablets, etc. For a key to additional abbreviations, refer to the table on the following page.

Route of administration, descriptive information, strength, quantity, and drug class symbol (where applicable) appear next, followed by National Drug Code (NDC) number. The Average Wholesale Price (AWP), Direct Price (DP), and the Orange Book Code (OBC) complete the entry for each product. For more information on Orange Book Codes, refer to the next page.

Drug Class Symbol		NDC (National Drug Code)	DP (Direct Price)	
PRODUCT NAME (Manuf)				
generic cross-reference				
TAB, PO, 100 mg, 100s ea, C-V		00839-7713-05	9.79	2.25
1000s ea, C-V		00839-7713-16	93.95	69.60
300 mg, 100s ea, C-V		00839-7714-06	23.88	17.55
Route of Administration	Strength	Quantity	AWP (Average Wholesale Price)	
			OBC (Orange Book Code)	
Form				

All prices are current as of the date *Red Book* went to press. However, actual prices paid by retailers may vary, and all prices are subject to change without notice. The prices shown here are based on data obtained from manufacturers, distributors, and other suppliers. While great care has been exercised in compiling this information, the publisher of *Red Book* does not warrant its accuracy. Information may be supplemented by subscribing to the monthly *Red Book UPDATE*, ReadyPrice™, *Red Book for Windows*™, *Red Book* database services, or by obtaining prices published in catalogs or other printed materials disseminated by manufacturers or distributors.

### ROUTE OF ADMINISTRATION ABBREVIATIONS

Route of Administration (ROA) refers to the intake or application method of a product. The following abbreviations are used to indicate the ROA:

BC	Buccal	OT	Otic
IH	Inhalation	PL	Intraleural
IJ	Injection	PO	Oral
IP	Implantation	RC	Rectal
IR	Irrigation	SL	Sublingual
MM	Mucous	TD	Transdermal
	Membrane	TP	Topical
NS	Nasal	UR	Urethral
OP	Ophthalmic	VG	Vaginal
